

Apple II File Type Notes

Developer Technical Support

File Type: \$5A (90)
Auxiliary Type: \$0000
Pathname: *:System:Sounds:Sound.Settings

Written by: Dave Lyons

May 1992

The file with this type, auxiliary type, and pathname records the user's mappings from SysBeep2 codes to sound names.

The File Format

The file lists a number of **Word/String** pairs, just like an `rTaggedStrings` resource:

count	(+000)	Word	Number of word/string pairs.
firstWord	(+002)	Word	Word value of first pair.
firstString	(+004)	String	Pascal string of first pair.
secondWord	(+xxx)	Word	Word value of second pair.
secondString	(+yyy)	String	Pascal string of second pair.
...			

The word in each pair is either a SysBeep2 code (\$0000..\$3FFF) or \$FFFE (for System Beep). The string in each pair is the resource name of an `rSoundSample` resource present in any file in the *:System:Sounds folder.

There are two special strings: "*" means Standard Beep, and "0" (zero) means Silence.

The order of the pairs is not important, but no two pairs can have the same word value.
