Beagle Bros History

YESTERDAY

It was the height of the industrial revolution and inventions of all kinds were being introduced to the American people. The Beagle brothers, like many other inventors, had a dream of success. First, they tried their hands at peddling hair tonic. Well, you can imagine what happened after one brother lost his hair! One day they both confessed that after peeling back the truth to their dreams the core seemed to stem from visions of apples. Not knowing exactly how apples were going to play a part in their success, they planted an orchard of apple trees. When the apples were finally ready to harvest they kept busy for months baking apple pies—maybe this was what their apple fancy was trying to tell them to do. They even started a celebration they called Applefest to encourage people from far and wide to come eat their pies. People thought the idea was rotten. The Beagle brothers were beginning to realize that something was very different about the apples they had envisioned.

Many years went by and the Beagle brothers' dream became lost in every day life. But they loved visitors and would always sit and talk to anyone that would lend an ear. Then one day a young man named Steve stopped by to chat with these eccentric fellows. He told the brothers he was working on something very revolutionary. It was a computer that would be different from any other computer.

Now, the Beagle brothers hardly understood what a computer was, but the seed had been planted, they liked what they heard and they knew they wanted to be a part of Steve's invention. But how . . .

Well, we all know the rest of the story. The Beagle Bros and Steve's Apple Computer were a great marriage and went on to make history.

TODAY

Today, Steve is gone from Apple computers and the vision of the Beagle brothers lives in the heart of all the Beagle Bros employees: A dedication to excellent software, high quality, low prices, friendly service, knowledgeable technical support and enjoying our jobs.

TOMORROW

The Apple II market is constantly changing — and we're changing with it to meet the needs of Apple II users. This year we introduced Platinum Paint, the most featured-packed IIGS graphics program ever published (see page 12). And just when you thought there was nothing left to write for AppleWorks, we introduced five new AppleWorks enhancements.

Educators love our products so we started developing our TimeOut Activity Guide Series to help teachers gain more productivity from their TimeOut products.

Thanks for buying our products and supporting Beagle Bros and the Apple II. We are sure you'll find all of our products as sweet as a delicious apple and never sour like a lemon.

Our 1991 catalog was designed and illustrated by Graphics Designer, Rebecca Lambing. Writing and editing was done by Jeff Jungblut and Bevey Minarovich, along with the humorous Beagle Bros staff. Special thanks to Antique Warehouse in Solana Beach and Shelley Miller for the use of the props you see throughout the catalog.

AppleWorks Enhancements

AppleWorks 3.0®

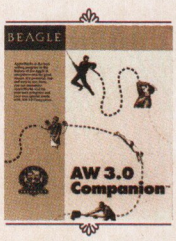

If you have an Apple II, and you don't have AppleWorks 3.0, welcome back from Siberia. This is the most powerful, easy to use, fully integrated productivity software available. We know because we wrote version 3.0 of AppleWorks, and we added several new features to the word processor, data base, and spreadsheet. Whether you need to check a letter using a powerful spell checker, use mail merge to cut your work load in half, keep track of a variety of information in the database, or calculate information in the spreadsheet, AppleWorks will make you the master of these functions and allow you to move information between them easily. If that isn't enough to stimulate your cerebellum, then we can tantalize you with twenty different TimeOut programs with over 100 enhancements which add every feature imagineable to AppleWorks. The TimeOut series adds outlining capabilities, forms generation, a thesaurus and much more to the word processor. Your spreadsheet can be enhanced by graphing functions and sideways printing, among numerous other features. And the ability to categorize, convert, report and manipulate data like never before. All TimeOut programs are economical, powerful, user friendly, dependable and seamless inside the best integrated program ever.

What are you waiting for? If you have AppleWorks, upgrade to the latest version and if you don't have AppleWorks, join the ranks of over one million productive and happy AppleWorks enthusiasts.
$249.00/$79.00 upgrade

**To receive an upgrade you must also send in your original AppleWorks disk. Choose between your 3.5 and 5.25 inch disks. You may only upgrade one size.*

AW 3.0 Companion™

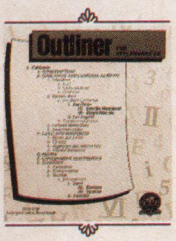

Change AppleWorks 3.0 to suit your own special needs with AW 3.0 Companion.

When you start up the disk you'll be greeted by familiar AppleWorks-style menus. Just select the changes you want made and AppleWorks will be customized to your liking! Over 70 ways to personalize are included.

You can change the default printer options in new word processor files and spreadsheets, speed up loading and recalculating spreadsheet files, leave the cursor where it is after cancelling record selection rules, disable the disk formatter, use expanded memory as both Desktop memory and a RAM disk, eliminate all those "Do you really want to do this?" questions, add MouseText to screens and menus, change the AppleWorks beep to something less obnoxious, and more.
$39.95

**Requires AppleWorks 3.0.*

Outliner™ for AppleWorks 3.0

This exciting productivity tool brings outlines to your AppleWorks 3.0 word processing. Outliner for AppleWorks 3.0 lets you organize information up to six levels deep. Use it to create to-do-lists and tests, prepare curriculum or generate lesson plans. Anything you can organize into different topics or levels can be processed with Outliner.

Outliner integrates seamlessly with the AppleWorks word processor and is always just a keystroke away. When you press Open-Apple-+, you are taken from the normal edit mode of the word processor to outline mode. In this mode you can insert topics, edit or move topics around and arrange topics alphabetically.

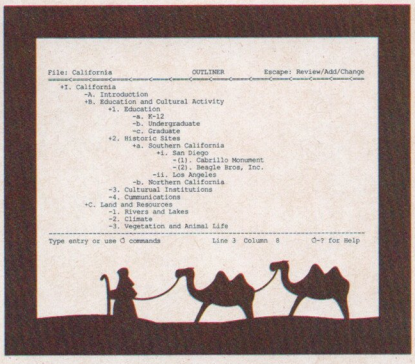

You can also hide or expand topics to reveal subtopics and body text. Topics can be shifted up or down levels and the associated subtopics and body text will move along with the main topics. You can choose how many levels deep the outline mode should display and you can even edit the body text for specific topics while in Outliner.

You also have the option to choose how you want your outline to look. You can pick a popular label style, like Harvard, Legal or Symbol, or create your own. Quickly collapse an outline to get a bird's eye view of your document, then zoom in on just the part you want. The layout of your outline can be customized by determining how many indents you want for all six levels, as well as the body text.

You can find, copy and move text in your outline without having to exit back to the AppleWorks word processor.

Outliner was the Editor's Choice in A+ / inCider, December 1990 edition. No longer do you need to feel disorganized before starting a task; let Outliner help lay out your thoughts and make your planning easy. ***$69.95***

**Requires AppleWorks 3.0*

AppleWorks 3.0 and all TimeOut programs require a minimum 128K IIe, IIc, IIc+ or IIGS with one 5.25 or 3.5 inch disk drive. All TimeOut programs also require AppleWorks 2.0 or later unless otherwise noted.

third time's the charm • hat trick • thrice as nice • three amigos • *triplets* • 3 •

TimeOut TextTools™

TimeOut TextTools is for serious Word Processor users. The applications included with TextTools take the chore out of producing long or complicated documents—reports, thesis papers, newsletters, even your Great American Novel.

With TextTools you can speed up text entry and formatting, find and replace printer options, build a table of contents and an index, create multiple-column documents, fill in pre-printed forms and more.

With Glossary you can stop typing the same thing again and again. Glossary lets you select boilerplate text from a menu and insert it anywhere—enter names, addresses, even whole paragraphs faster than you can type. It's versatile; you can edit and add to Glossary at any time.

What Glossary does for text, QuickStyles does for printer options. Just select a style from a menu, such as "Bulleted Paragraph", and your printer options are instantly entered for you. And speaking of printer options, SuperFind will let you find and replace them—AppleWorks can't do that! We didn't forget Tab Rulers either—with QuickTabs, you'll never have to fuss with the AppleWorks ruler editor again!

MarkMerge lets you print onto any type of pre-made form—something impossible with AppleWorks alone. And MultiPrint lets you print up to 100 word processor files at the same time. Do all your printing at once!

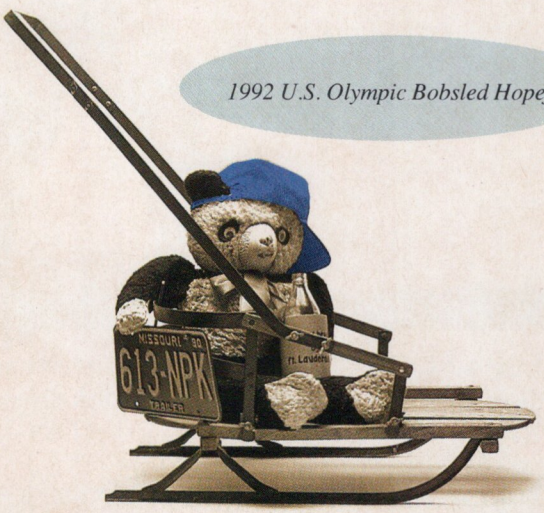

For the demanding writer, we created Analyst, Table of Contents Generator, and Indexer. These applications let you check your writing style, automatically build a table of contents or an outline, and create an index—and they're as fast and easy to use as the built-in Spell Checker.

CopyBlock is the quickest way to get multiple columns of text exactly the way you want. Just highlight a rectangular block of text, pick the new location, and presto! Instant multi-column publishing. Any shape or size block of text can be super-imposed over existing text. Great for adjusting tabbed columns.
$49.95

**Requires AppleWorks 3.0*

1992 U.S. Olympic Bobsled Hopeful

TimeOut QuickSpell™

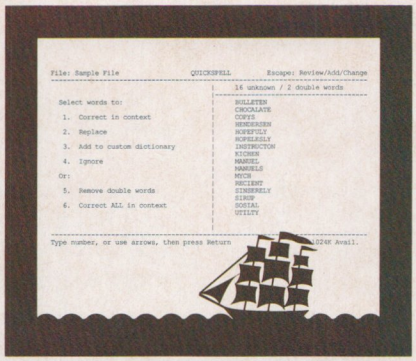

Quick-Spell is the perfect electronic proof-reader. With QuickSpell, you can catch your typos and spelling mistakes fast—before somebody else does!

QuickSpell scans your document and displays all the words not found in its huge 80,000 word Random House dictionary. Just select a new word from a list of suggested words, and it will be replaced in your document.

QuickSpell also reports double words—a common common error in Word Processing. On command, QuickSpell will remove them for you.

QuickSpell is so good that Claris (those nice people who publish AppleWorks) asked us to make it a new feature of AppleWorks 3.0.

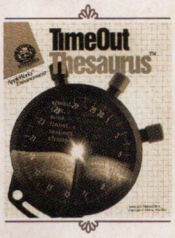

So we did. Now Claris is one of our 250,000 satisfied TimeOut customers.

If you don't have AppleWorks 3.0, get QuickSpell.

Or, upgrade your version of AppleWorks. Those misspelled words won't go away by themselves.

$69.95

TimeOut Thesaurus™

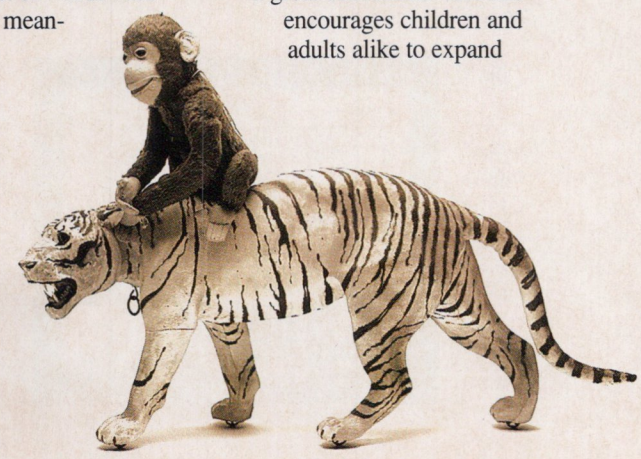

Never again will you be at a loss for the right word!

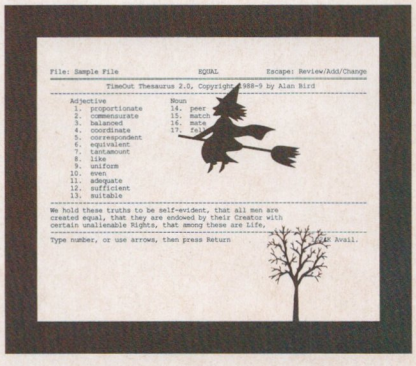

Place the cursor on any word in the word processor and select Thesaurus from the TimeOut menu. You'll see a list of words with similar meanings—synonyms—displayed on the screen. Choose the new word you want and Thesaurus will automatically replace the original word.

Thesaurus is the perfect tool for brain-storming and idea generating. Synonyms are listed according to parts of speech, like noun, verb and adjective. This makes it a great educational tool and encourages children and adults alike to expand their vocabularies.

Thesaurus is powerful: more than 5,000 root words contain over 45,000 synonyms! And Thesaurus is fast: a growing list of synonyms appears on the screen instantly. After using TimeOut Thesaurus, you'll never go back to an old-fashioned thesaurus in book form.

The one word everyone has to say about Thesaurus is "Wow"! But you could also say amazing, incredible, fantastic, wonderful, terrific... ***$49.95***

TimeOut SuperFonts™

Now you can have the option to print out your AppleWorks files with fancy fonts and graphics. With SuperFonts, everyone will think you've done your work on a Mac!

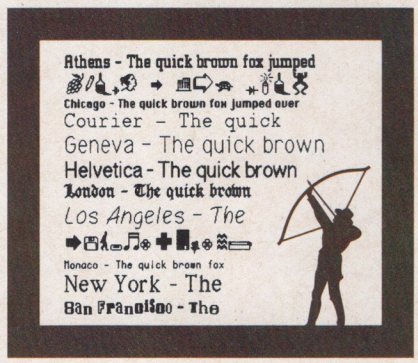

SuperFonts is easy to use. It works with all the same formatting commands you normally use in AppleWorks: page width and length, margins, headers and footers, indent, mail merge, right justify and absolute tabs. You enter text into the AppleWorks word processor just the way you always do.

What a difference in your printouts! Your documents are printed in eye-catching, proportionally spaced characters in a variety of styles, including underline, boldface, italics, outline, shadow and inverse.

You can even mix graphics with your text. Pictures can be positioned and trimmed to fit anywhere on the page. You can also print to the screen to see how your file will look on paper.

SuperFonts supports most popular dot matrix printers and includes 47 fonts and a paint program *free*. ***$69.95***

**Requires a dot matrix printer*

TimeOut Paint™

TimeOut Paint is a black and white graphics program with menus, dialog boxes and optional mouse control—inside AppleWorks! Paint makes you a digital Picasso with commands like Cut, Paste, Invert, Flip, and many more. You can use standard Apple II graphics formats, and also pictures from Print Shop and Print Shop GS.

Paint, a $49.95 value, comes *free* with Graph and SuperFonts. Personalize your graphs or create original pictures to print with SuperFonts.

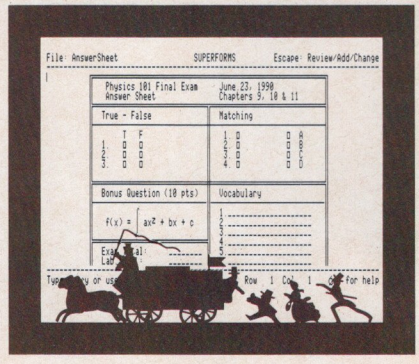

TimeOut SuperForms™

Super-Forms, a utility that works with TimeOut Super-Fonts lets you create custom forms right inside AppleWorks. With SuperForms you can graphically design your form right on the screen, so you know what your form will look like in print.

Quickly design answer sheets, attendance reports, grade cards, invoices, order forms and more. Once you've created your form, FormFill will allow you to fill in your forms with information transferred from a data base, spreadsheet or word processor file. You can also use this feature to create personalized calendars and to-do lists, or any form with which you need to merge AppleWorks data. ***$69.95***.

**TimeOut SuperForms requires AppleWorks 3.0 or later, SuperFonts and a dot matrix printer.*

TimeOut UltraMacros™

If you're tired of typing the same series of key strokes over and over again, then you should learn about macros. TimeOut UltraMacros is the greatest time-saving device since the wheel! No other single program has the power and flexibility of UltraMacros.

A macro is a pre-recorded series of keystrokes. Usually, pressing a key gives you one character of input. But UltraMacros can record your keystrokes to totally automate AppleWorks. Pressing one key to activate a macro can send a whole series of keystrokes back to AppleWorks again —this time, blindingly fast.

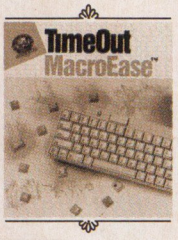

You can have up to 180 macros in memory at one time, with over 4,000 total keystrokes.

UltraMacros is not limited to the word processor. Macros can be used anywhere in AppleWorks. For example, it takes at least six keystrokes to add a new file to the desktop. Record a macro and do it in one!

For programmer types UltraMacros includes its own programming language that allows you to use AppleWorks on a completely new level. You get full IF-THEN-ELSE logic, string and numeric variables, and lots more.

No matter what your level of sophistication with AppleWorks—new user to power user—UltraMacros will save you countless hours of typing. ***$59.95***

TimeOut MacroEase™

If you know what to say you can get AppleWorks and UltraMacros to do just about anything. Learn the macro language with MacroEase! This package contains a jumbo size collection of macro expertise expressed in clear, how-to form. Discover loads of macro secrets.

MacroEase lets you create your own custom AppleWorks menus, write your own interactive multiple choice quizzes, balance your checkbook, even take out the trash. (Well, not quite. We're still working on that part.)

With Mr. Publish, a macro application included with MacroEase, it's no problem to do multiple-column word processor files. Just set the number of columns and lines per page, and go!

Your single-column word processor file is quickly transformed into an impressive multi-column document.

MacroEase even contains a Macro Tour for macro programming beginners. Also included are new tools that make macro programming even easier, and over 400K of sample macros. ***$39.95***

**Requires AppleWorks 3.0 and UltraMacros 3.0*

Yesterday and today
—we've still got sole!

It was inevitable...

Now that we have over 10 years of Apple II experience under our belt, Beagle Bros is branching out into the Macintosh market the same way we started with the Apple II: by writing fun-to-use, indispensable utilities. If you're a Macintosh user, call 1-800-345-1750 and ask for our free Macintosh software catalog.

the seventh day • seven-up • **lucky seven** • *seven eleven* • **seven-ten split** • 7.

TimeOut ReportWriter™

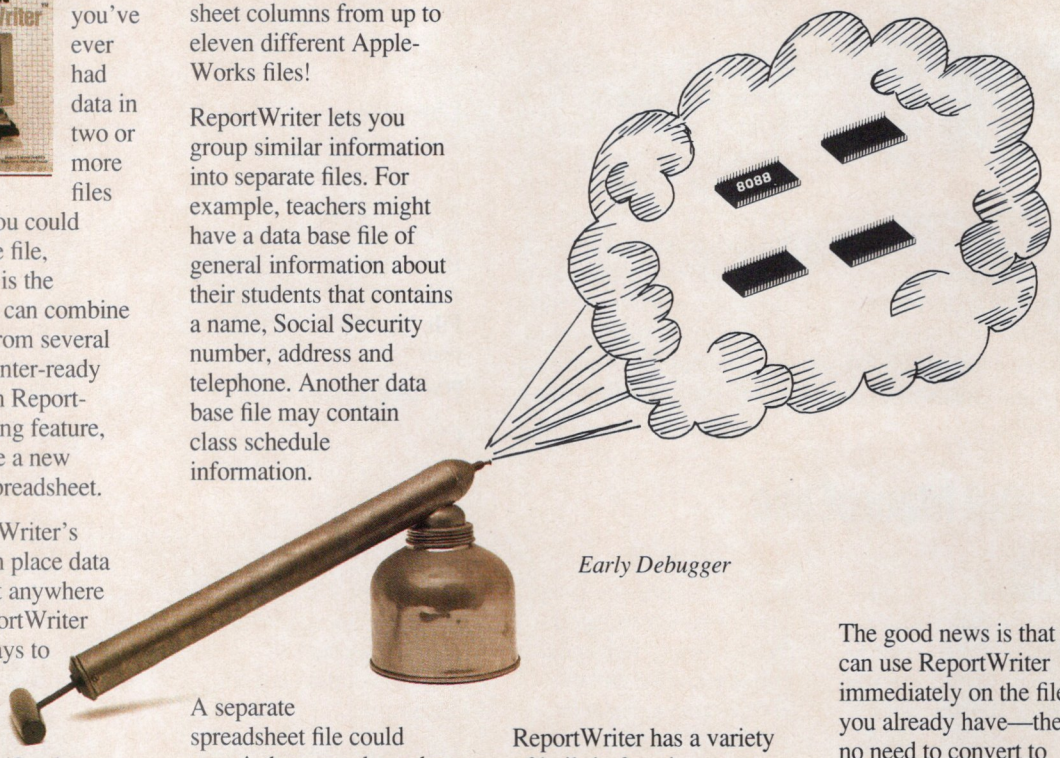

If you've ever had data in two or more files and wished you could create a single file, ReportWriter is the solution. You can combine information from several files into a printer-ready report, or with ReportWriter's posting feature, you can create a new database or spreadsheet.

Using ReportWriter's editor you can place data fields and text anywhere you like. ReportWriter scrolls sideways to accommodate reports on wide paper, up to 240 columns.

Unlike the two-line headers AppleWorks permits, you can define headers and footers any way you like. An optional subtotal section at the end of each page lets you summarize information. In addition, title and closing sections can be used to give your report a professional look.

One of ReportWriter's strongest features is the ability to combine information from two or more files into the same report. They can be database, spreadsheet, or even word processor files. You can combine up to 254 data base categories or spreadsheet columns from up to eleven different AppleWorks files!

ReportWriter lets you group similar information into separate files. For example, teachers might have a data base file of general information about their students that contains a name, Social Security number, address and telephone. Another data base file may contain class schedule information.

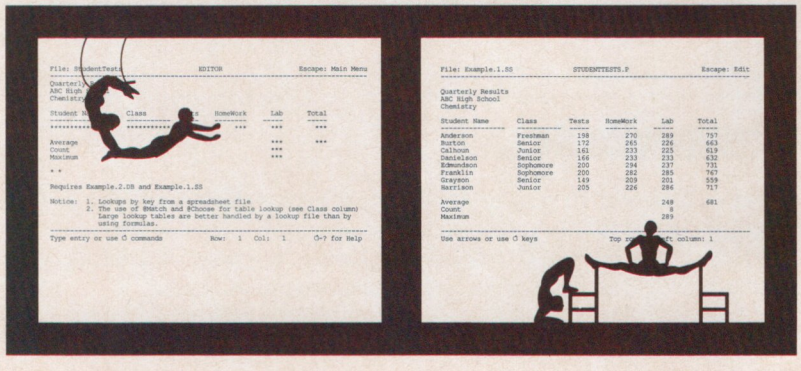

Early Debugger

A separate spreadsheet file could contain homework grades. Using ReportWriter, you can pick and choose information from all three files and place it into one report to create report cards, attendance records, multiple-column mailing labels and more.

ReportWriter has a variety of built-in functions to operate on text, numbers, and dates. Any of the 254 ReportWriter fields can be calculated fields, and you can do statistic operations on your data such as totals, subtotals, averages, counts, minimums and maximums.

The good news is that you can use ReportWriter immediately on the files you already have—there is no need to convert to another type of file.

To solve your reporting problems, get ReportWriter and turn AppleWorks' limited database capabilities into a powerful administrative and business tool! ***$79.95***

TimeOut DeskTools™

DeskTools adds all kinds of time-saving applications to AppleWorks.

Calendar - See your daily and weekly appointments at a glance.

Calculator - A handy calculator with an electronic tape you can edit and print with ease.

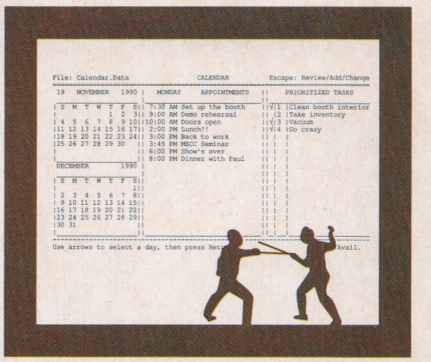

Case Converter - Change the case of a whole document in one key press!

Dialer - Place the cursor on a phone number and AppleWorks dials it! (Modem required.)

Envelope Addresser - Makes this time-consuming job quick and simple.

Page Preview - Looking before you print will save lots of time and paper!

Word Count - Find the exact number of characters, words and lines in your file.

File Encrypter - Protect your important files from prying eyes!

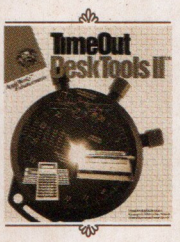

Clock - Time at a glance!

Data Converter - Move data between the spreadsheet, data base and word processor.

Puzzle - A game of skill.

Only $49.95

TimeOut DeskTools II™

We thought we had put everything into DeskTools that TimeOut users could ever want. But our customers just couldn't get enough! So here's more.

Area Codes - Find area codes for over 400 cities.

Calculator+ - A powerful full-function scientific and financial calculator.

Clipboard Viewer - Peek directly at the clipboard.

Directree - Find and load any file without typing!

Disk Tester - Test to be sure your important disks are in good condition.

File Search - Find data anywhere—in any file on the disk!

Measurements - convert units of length and weight.

Print Manager - Send codes right to your printer!

Screen Out - Turns off the screen when you leave the computer.

Stop Watches - Track the elapsed time of five events simultaneously!

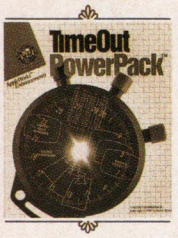

A fantastic deal at ***$49.95.***

WeedPicker from TimeOut GardenTools

TimeOut PowerPack™

This package full of AppleWorks additions earned the Editor's Choice Award in the August 1988 issue of inCider Magazine. Look at the Power in PowerPack:

Triple Desktop - This amazing TimeOut application actually allows 36 desktop files at one time!

Triple Clipboard - And to go along with your larger desktop, you can have three clipboards, too! (Not compatible with AE Expander.)

Program Selector - Lets you leave AppleWorks, go to another program and exit back to AppleWorks *fast*.

ASCII Values - Convert between ASCII, decimal, hex and binary values — great for translating your printer codes.

Help Screens - Create your own customized AppleWorks help screens—this one is perfect for teachers.

File Librarian - Get organized with a data base of all the files on every one of your ProDOS disks. Put an end to hunting through stacks of disks to find the right file!

Desktop Sorter - Arrange your files in any order you like in the AppleWorks Desktop Index.

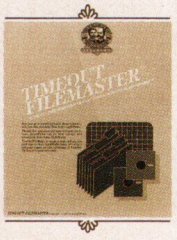

Category Search - Now you can search individual data base categories, rather than the whole data base.

AWP to TXT - Create text files without all of the extra carriage returns that AppleWorks adds to your text.

Line Sorter - Now you can sort columns of word processor information into alphabetical and numerical order—like in the database!

All this for only ***$49.95!***

TimeOut FileMaster™

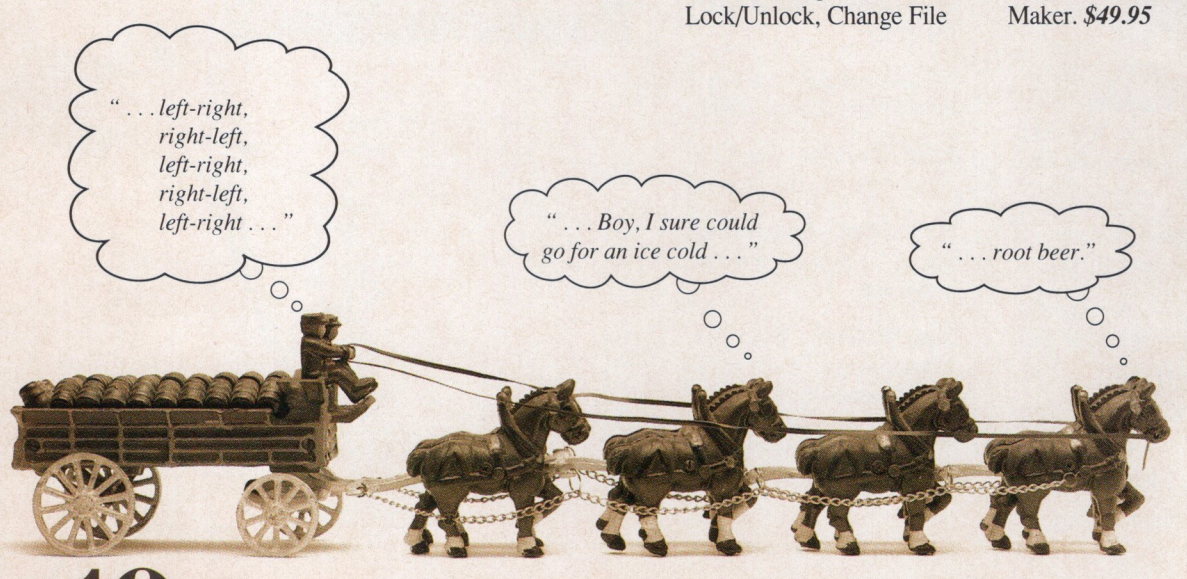

FileMaster gives you the tools you need to do the smart thing: regularly backing up your files to avoid the horrors of a crashed disk.

With these file management tools right inside AppleWorks, doing the smart thing is a lot easier. Not to mention faster.

Copy both files and disks—FileMaster shows you which files have changed since the last time they were backed up. You can even copy whole subdirectories at a time!

Other features include Format, Compare, Rename, Lock/Unlock, Change File Type and more.

Our technical support department relies on FileMaster daily to maintain their "housekeeping." Once you know how easy it is to keep your files backed up you have no excuses not to use FileMaker. ***$49.95***

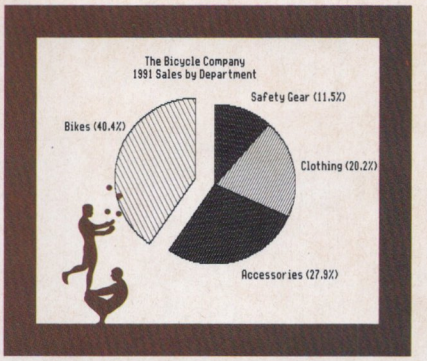

TimeOut Graph™

Don't waste your time trying to make sense out of columns of numbers! Organize your spreadsheet and data base figures into clear, informative graphs.

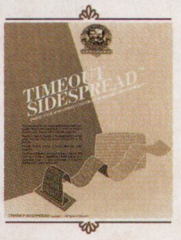

Your graphs will look like they took hours, but you'll be surprized how fast and easy they are to make. Just choose the type of graph you want and it appears instantly—all ready to print—with titles, subtitles, legends, borders, and more.

You don't have to be a spreadsheet whiz to take advantage of Graph's nine graph types, including Bar, Line, Pie, XY, Area, and Hi-Lo. And TimeOut Paint, the paint program that comes free with Graph,

allows you to customize your graphs. Graph prints your finished graphs in three sizes and works with most popular dot-matrix printers. ***$89.95***

TimeOut SideSpread™

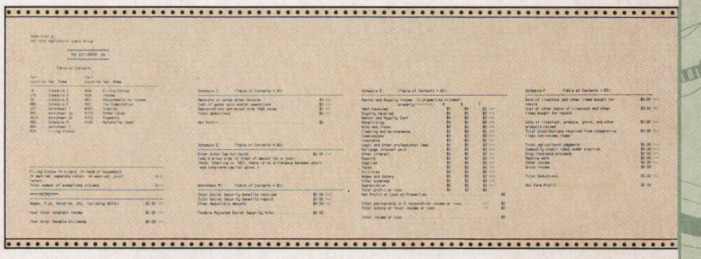

Murphy's Law of Spreadsheets: The quality of a spreadsheet is directly proportional to the difficulty in printing it out.

The solution to this age-old problem is SideSpread.

With SideSpread, you print your spreadsheet files sideways—and gain an unbroken vista of your spreadsheet data. No more cutting and pasting sections together, and no more hassling with margins and column widths.

SideSpread prints in two different fonts—Courier and Monaco—in a wide range of sizes. You can

adjust the font size to make your spreadsheet fit the paper, no matter how wide your spreadsheet is.

Best of all, you don't need to leave AppleWorks. Just print the way you always do. SideSpread can even print your word processor and data base files sideways, too!

SideSpread supports three different print qualities and works with most popular dot matrix printers.***$49.95***

TimeOut SpreadTools™

If you spend a lot of time with spreadsheets, you need SpreadTools. These exciting new applications will help you get out of the office fast!

Analyzer - Check your spreadsheets for common errors. Track cell references and see 80 spreadsheet columns at once.

Block Copy - At last! Copy and move cells without creating new rows or columns!

CelLink - Link cells together from up to eleven different spreadsheets at once—create gigantic spreadsheets now!

Data Converter - Transfer data between the word processor, data base and spreadsheet.

Formula to Value - Remove formulas from a block of cells and convert them to values.

Quick Columns - Change the width of a range of columns with one key press, without holding down the arrow keys.

Rows <-> Cols - Take a range of rows or columns and rotate them.

Only $59.95

IIGS Graphic Programs

Platinum Paint™

We now bring you the fastest and most powerful paint program available!

Platinum Paint lets you draw a variety of shapes, lines and curves in sixteen different colors. The nine brush methods let you paint normally, create charcoal and shaded effects, smooth and blend colors for a less computerish look, and easily wash grayscale images with color.

All commands are clearly displayed in pull-down menus and dialog boxes. And for Power Users, there are over a hundred keyboard equivalents for the menu commands and tools.

The Palette Editor has a plethora of controls that let you fine-tune colors—Warmer, Cooler, Mix, Blend, Lighter, Darker and more—or view a scale of 256 similar colors to pick just the shade you want.

The ultra-flexible lasso has four methods of selection, plus "slippy colors," which lets the lasso shrink around a range of colors—not just the background color. You can take any selection you make with the marquee or lasso tool and perform many special effects with it: Lighten, Darken, Mirror, Recolor, Resize, Flop, Rotate, Shadow, Perspective, Brushify, and more.

Platinum Paint lets you import graphics from Print Shop, Print Shop GS, Apple II HiRes and Double HiRes, and MacPaint. The graphics you create can be pasted into other IIGS applications such as HyperStudio and BeagleWrite GS.

There's more!

- Color remapping
- Bezier curves
- Gradient fills
- Create animation
- Automatic shadowing
- Advanced area and color masking
- Easily switch between 320 and 640 mode

Platinum Paint was inCider Magazine's Editor's Choice in January 1991!
$99.95*

BeagleDraw™

BeagleDraw, the leading draw program for the IIGS, gives you professional graphics tools.

BeagleDraw's object-oriented design sets it apart from paint programs. The advantage of BeagleDraw is precision. First, you create an object: make it any size, color and shape you like. Then use the mouse to move the object where you want it on the screen.

Objects can be independently moved on top of other objects without destroying the background. BeagleDraw makes designing graphics as easy as arranging furniture in a room.

Objects can be resized and reshaped at any time. You can even duplicate, flop and rotate objects.

Object-oriented graphics print out far better on a LaserWriter than graphics printed with paint programs. ImageWriter II printing is super sharp, even in color.

You can use BeagleDraw to edit and print all of your existing graphics, so BeagleDraw will complement any IIGS paint program you already own.
$89.95*

**Platinum Paint, BeagleDraw and BeagleWrite GS require an Apple IIGS with at least 1 Mb RAM, a 3.5 inch disk drive and color monitor.*

Graphic Word Processors

BeagleWrite GS™

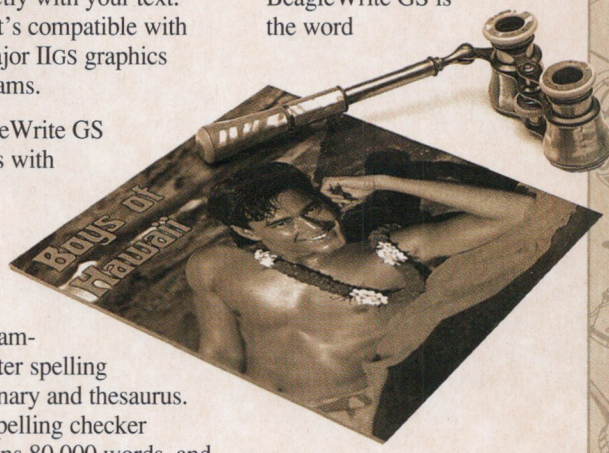

BeagleWrite GS, the latest and greatest in word processor technology from Beagle Bros, is the closest thing to Mac software you can run on an Apple IIGS—a world class word processor in the Macintosh tradition.

Pull-down menus and intuitive mouse control make BeagleWrite GS the most elegant, effortless way there is to get your words into print. And do it beautifully—with Macintosh fonts in a rainbow of sizes and colors.

You'll love the speed and efficiency of "What You See Is What You Get" word processing. Your print outs are just as eye-catching as the screen. BeagleWrite GS has the highest standard of printing possible—in 16 colors on the ImageWriter and near typeset quality on the LaserWriter.

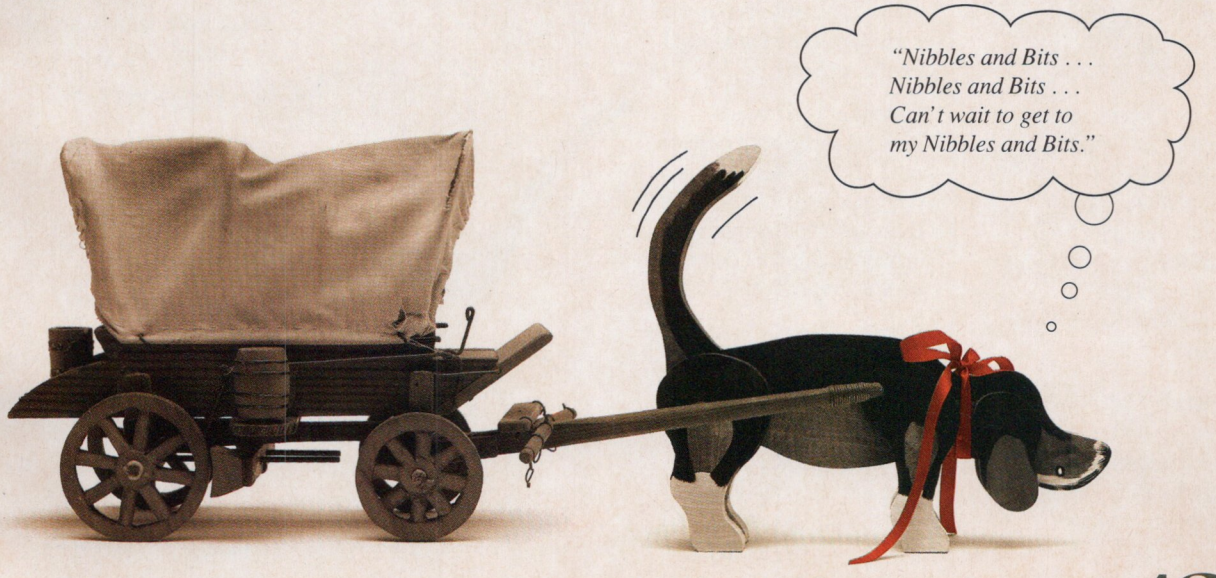

BeagleWrite GS lets you draw lines, ovals, rectangles, as well as paste graphics from other programs. Graphics can be placed anywhere in a document. You can reshape and trim your pictures to fit perfectly with your text. And it's compatible with all major IIGS graphics programs.

BeagleWrite GS comes with the

Merriam-Webster spelling dictionary and thesaurus. The spelling checker contains 80,000 words, and offers suggestions based on spelling *and* pronunciation. The on-line thesaurus has over 450,000 synonyms—making it the artistic tool for serious writers!

BeagleWrite GS is the word processor of choice for Apple IIGS owners—unrivaled for home, school and small business use. ***$99.95****

BeagleWrite™

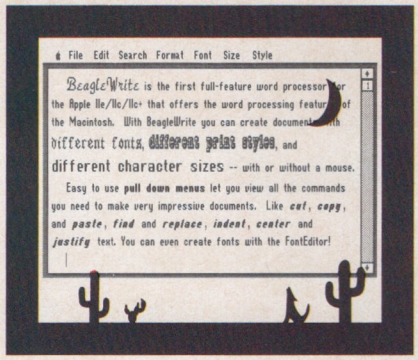

BeagleWrite is the finest graphics-based word processor you can buy for the IIe, IIc, and IIc+. It was the inspiration for BeagleWrite GS—and countless other word processors.

The Macintosh-like features of BeagleWrite include a menu bar, pull down menus, dialog boxes and optional mouse control. BeagleWrite's easy operation dramatically cuts down learning time and increases productivity.

BeagleWrite is a writer's tool. It frees you to concentrate on your writing—not on how to use the computer. And there's a 50,000 word spelling dictionary that comes with BeagleWrite. Proofreading was never like this before!

You can choose from a wide range of fonts, character styles and text formatting options. BeagleWrite even comes with a built-in font editor, so you can customize existing fonts, or create your own brand new ones.

Best of all, what you see on the BeagleWrite screen is what you get on paper. Font styles are displayed just like they print out. BeagleWrite supports most popular printers. And its six print quality options help you get just the look you need—with no guesswork.

Fast, easy and fun. To get everything you could ask for in a word processor, ask for BeagleWrite. ***$79.95***

BeagleWrite Desk Accessories™

Now you can have all the convenience of Macintosh desk accessories with your IIe, IIc or IIc+. Designed for use with BeagleWrite, Desk Accessories puts five frequently needed on-line accessories in BeagleWrite's pull-down menus!

Scientific Calculator - You get easy operation with no loss of features. This true scientific calculator has all arithmetic functions, trigonometric functions, memory, inverse and more.

Clock - Time-stamp your important BeagleWrite documents and display the current date and time right on the screen.

Calendar - This is a desktop tool you'll depend on. Calendar has a day-by-day appointment book and diary for planning your schedule. It even contains an electronic Note Pad.

Control Panel - This accessory lets you control the sound and cursor speed in BeagleWrite.

Best of all, the Control Panel gives you macros—and macros give you speed! Macros reduce multiple keystrokes to a single keystroke. You can enter frequently used phrases into BeagleWrite documents by pressing just a single key. End repetitive typing, save your fingers and save time!

Puzzle — Enjoy a quick break from work with this interesting game.

Only $39.95

BeagleWrite Picture Manager™

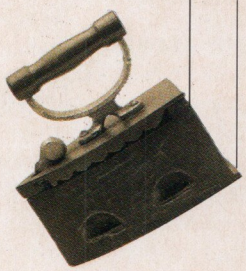

Now you can showcase your art right inside BeagleWrite with incredible control! Picture Manager is a BeagleWrite accessory that lets you add graphics to your documents.

Picture Manager allows you to easily convert your graphics into BeagleWrite fonts. This gives you total flexibility in positioning your pictures in a document and allows you to mix graphics and text in any combination you like. You can position up to 15 pictures in a single word processor file, so the graphic potentials are almost unlimited!

Picture Manager uses standard Apple II graphics. You are assured of compatibility with all major graphics programs for the IIe and IIc—TimeOut Paint, Mouse Paint, Dazzle Draw, Newsroom and Print Shop. You can use the BeagleWrite FontEditor, included with BeagleWrite, to further fine-tune your pictures.

If total control of your word processing output is what you want, get Picture Manager. It's fast and easy to use—with or without a mouse. ***$39.95***

FontPaks™ I & 2

Make your print outs more exciting with FontPaks—fonts designed especially for BeagleWrite.

Each FontPak volume contains over 40 striking fonts. These professionally crafted fonts can be added to your documents, and edited with BeagleWrite's built-in font editor.

FontPak 1 - An assortment of attractive fonts—from practical to sensational—for use in the home, school and office.

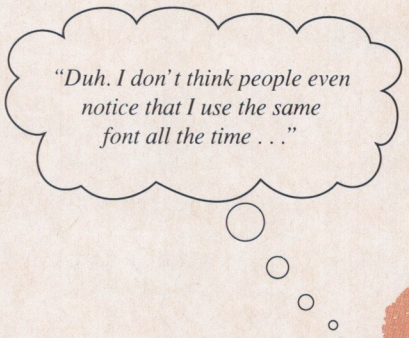

FontPak 2 - A whole series of fonts with pictures, signs and international symbols. There are also special symbols for use in science and math.

Also in FontPak 2, you get 10 European language fonts, including Italian, French, Swedish, Danish, German, Spanish, Russian, Polish and Czech. Also included are Greek, Arabic and Hebrew characters.

FontPak 2 even contains 10 border fonts. These fonts provide all types of design elements for greeting cards, signs and newsletters that command attention.

Give your words more personality with FontPaks. ***$39.95 each.***

Just for Teachers

SuperFonts Activity Guide™

To bring you the SuperFonts Activity Guide, Beagle Bros worked with AppleWorks authorities Jim Carlisle, director of TI&IE (Teachers Idea & Information Exchange), and David Chesebrough, editor of The AppleWorks Educator. Their experience and communications with hundreds of teachers emphasized the benefits of additional explanation, details and examples to assist a busy teacher trying to learn new software.

The SuperFonts Activity Guide is a collection of teaching materials that helps you get the most out of TimeOut SuperFonts in your classroom. Developed with the assistance of professional educators, the guide was written with the instructor in mind. A variety of ideas and examples for students and teachers are included. The guide also gives tips and explanations for integration of other resources, such as Print Shop pictures, public domain fonts, graphs from TimeOut Graph and shortcuts with TimeOut UltraMacros.

This package includes lessons, activities and materials which can be duplicated for use in classes and workshops. Each lesson includes sample printouts from the SuperFonts application. The Resource Disk contains files that illustrate the examples given for lesson preparation and application ideas. ***$49.95***

**Requires TimeOut SuperFonts*

"Do you really want to do this?"

School Licenses

For the convenience of the many schools which have requested our programs for use in the classroom, there are several different licenses available. They all come with the same 100 years of unlimited use.

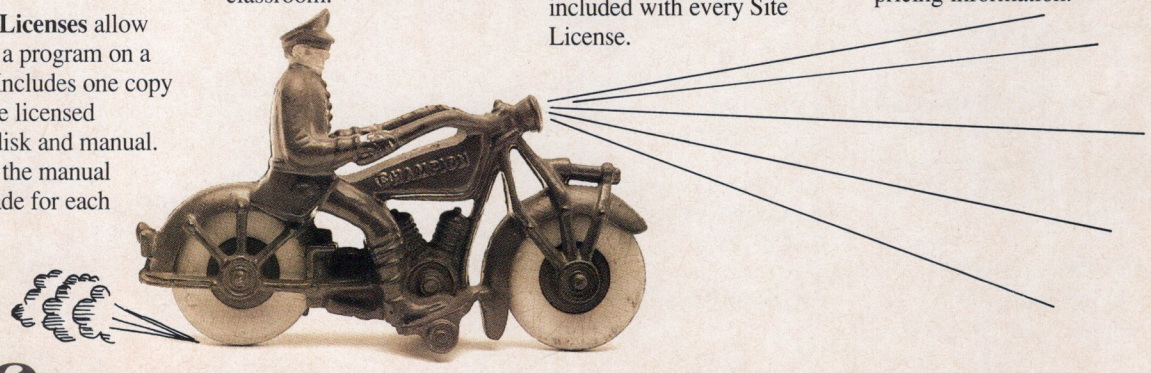

Network Licenses allow the use of a program on a network. Includes one copy each of the licensed program disk and manual. Copies of the manual can be made for each network user on one network. Multiple networks require multiple licenses.

Lab Licenses permit the teacher to make copies of a program disk and manual for all students in one classroom.

Site Licenses permit schools to make copies of the disk and manual for everyone in a building. Everyone may use the program, but copies are not to be taken off-site. A free network version is also included with every Site License.

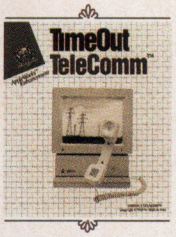

District Licenses allow every site in a school district to use the program. Upgrades for the school district are still only $10.00 per program.

See the catalog insert for pricing information.

Communications

TimeOut TeleComm™

Now you can link AppleWorks to your modem with TimeOut TeleComm. Never leave AppleWorks to log on to your favorite information service.

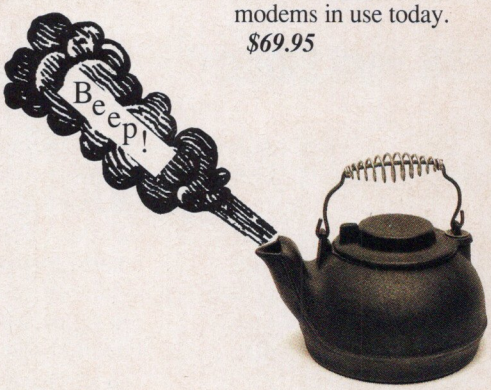

TimeOut TeleComm is extremely simple to use with no sacrifice in power. It's the telecommunications program you'll never out grow. Since you stay in AppleWorks, learning time is very short!

TimeOut TeleComm's wide selection of file transfer protocols insures you are supported by all information services.

TeleComm's 4,000 line, built-in review buffer can capture exceptionally long sessions. TeleComm's flexible text sending features allow you to send any word processor file on the desktop, the review buffer or a text file on disk.

Keep your commonly used phone numbers in an AppleWorks data base and TeleComm will dial the number for you, and then send your login sequence after the connection has been made.

Operation can be set at speeds ranging from 300 to 19,200 BPS.

And you can connect your Apple to the office mainframe with TeleComm's terminal emulation capability.

TimeOut TeleComm supports all Hayes SmartModem compatible (AT command set) modems—this includes virtually all popular modems in use today.

$69.95

Point-to-Point™

Point-to-Point has been the favorite of many of our best customers. It has received many prestigious honors. InCider magazine voted Point-to-Point the "All Time Best Telecommunications Program" in 1988. In 1987 Point-to-Point earned the "People's Choice Award" from inCider magazine and the "Software Excellence Award" from Nibble magazine.

Point-to-Point works with virtually all communications hardware: Hayes Smartmodem-compatible modems, the Hayes Micromodem and the Novation Apple-Cat II.

Point-to-Point supports the Xmodem and Ymodem standards for transferring files. Also supported is Binary II, which was invented by Point-to-Point's author, Gary Little.

Sending a file is easy with Point-to-Point. Just select the file name from a menu and it's off! You can even send multiple files at once.

Data entry speed is fast with Point-to-Point's built-in scripting capability. Create custom command sequences that are tailored to your own specific needs.

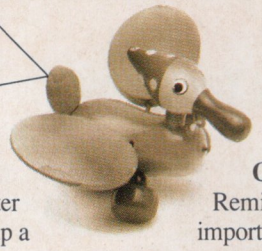

You can even automate your communications. Preset Point-to-Point to call any number at any time you like. It will dial, send or capture text, and then log off by itself. Save time and money by letting Point-to-Point do the work!

An important feature of Point-to-Point is its ability to connect your Apple to the office mainframe computer. Point-to-Point supports two popular terminal emulation protocols: VT52 and VT100.

All these powerful features in one easy to use program is the reason so many serious Apple owners use Point-to-Point. You should, too. ***$99.95***

Utilities

TO ORDER: (800) 345-1750

GS Desk Accessories™

GS Desk Accessories is the first set of Mac-like desk accessories for the Apple IIGS. Put these tools on your desktop with just a point and click!

GS Desk Accessories enhances all IIGS software—including Platinum Paint and BeagleWrite GS and includes new features:

Scrapbook - Combine text and graphics created in different programs.

Macros - Play back frequently repeated phrases with one key press.

Phone Filer - Find phone numbers faster than you can pick up a telephone book!

Screen Saver - Prevents burn-in by dimming the screen when it's not in use.

Scientific Calculator - You get all arithmetic and trigonometric functions!

Calendar - Reminds you of important dates.

Menu Clock - Puts the time right on the menu bar.

Alarm Clock - This alarm even has a snooze button!

Only ***$59.95.***

**Requires an Apple IIGS with at least 1 Mb RAM, a 3.5 inch disk drive and a color monitor.*

GS Font Editor™

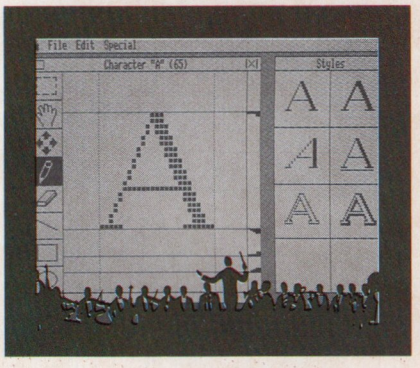

At last! Design your own IIGS system fonts with Beagle Bros' GS Font Editor.

GS Font Editor is the most powerful and complete program of its kind. It lets you edit standard IIGS system fonts—the same fonts used by virtually all IIGS-specific programs. You can also create your own foreign language character sets.

Don't be fooled by the name: GS Font Editor runs on the 128K IIe, IIc, and IIc+, as well as the IIGS. Besides the fonts used by IIGS programs, you can also edit fonts used by Beagle Bros' TimeOut SuperFonts and Timeworks' Publish It! GS Font Editor also includes a large selection of popular fonts in a wide assortment of sizes. You can scale and edit any font up to 127 points—large enough for signs!

The pull down menus contain a wide range of editing options. You can use the mouse to draw lines, boxes or circles. Erase, cut or paste with just a click. When you make changes, the different styles, such as italic and boldface, are displayed while you edit! **Mouse required.** ***$49.95***

Triple-Dump™

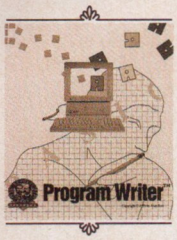

Get control of your printer with Triple-Dump!

Load your picture. Trim, rotate, reverse, magnify or enlarge it. Then print—in any one of the many print qualities Triple-Dump offers. You can create hard copies of all the standard Apple II graphics formats—Lo-Res, Hi-Res and Double Hi-Res graphics, as well as 40 and 80 column text screens.

Also included with Triple-Dump are print routines for BASIC programmers. These routines will save you many hours of frustration. Just CALL the machine language print module and Triple-Dump does the rest.

Supports all dot matrix printers and Apple IIs, comes in DOS 3.3 and ProDOS, and includes a banner printer! ***$39.95***

Program Writer™

The slowest and most tedious part of BASIC programming is entering and editing program lines. But not any more! Program Writer makes writing BASIC programs as easy as using a word processor.

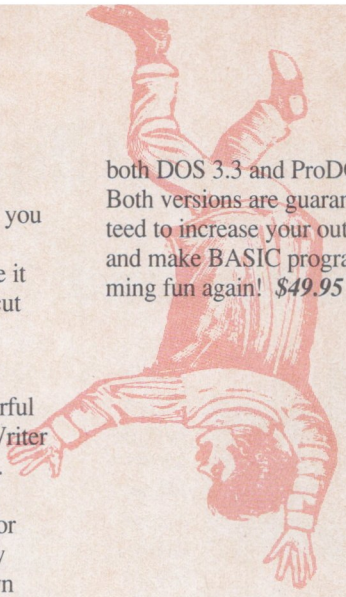

Program Writer replaces GPLE's BASIC line editor with a full screen text editor that functions like AppleWorks. Move the cursor around the screen and make changes in your program anywhere you want to. There's no need to continually re-list the program and trace over lines. Just use the arrow keys to scroll up or down to where you want to edit. Or use the mouse!

Program Writer adds all of these powerful functions: insert, delete, find, search and replace. Use the editor to convert upper and lower case, or list all program variables. And with Program Writer's auto-number and re-number commands, you'll never need to enter another line number again!

With Program Writer, you can cut text from one program line and paste it into another, or even cut and paste between programs.

One of the most powerful features of Program Writer is its macro capability. Enter commonly used strings like "PRINT" or "GOTO" with one key press. Design your own strings to input any series of keystrokes. It's like adding function keys!

Program Writer runs on all Apple IIs and comes in both DOS 3.3 and ProDOS. Both versions are guaranteed to increase your output and make BASIC programming fun again! ***$49.95***

"...When it absolutely, positively, HAS to be there next year!"

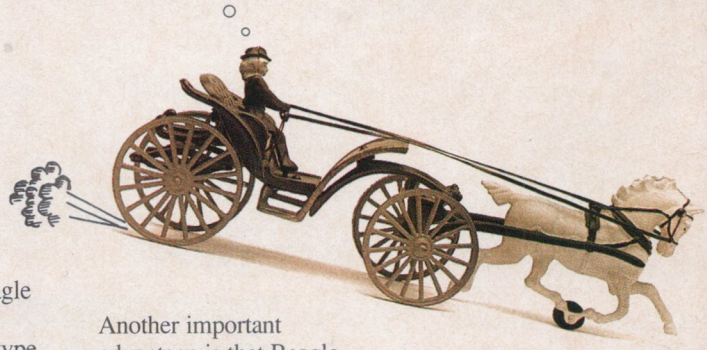

Beagle Compiler™

Speed—or should we say, lack of speed is the one bad thing about AppleSoft Basic. But what can you do? Learn machine language? Forget that!

The secret to blazing Basic is Beagle Compiler. You don't need accelerator cards or chips. With Beagle Compiler, there are no more sluggish text screens or crawling graphics. You get the same blistering program speeds as the experts!

Programming with Beagle Compiler is exactly the same, only faster. Just type RUN and your Basic program blasts off! All AppleSoft and ProDOS commands are supported, so you don't have to modify your existing programs.

Another important advantage is that Beagle Compiler lets your Basic programs use auxiliary memory for program variables. RamWorks-type memory cards, standard Apple memory and even IIGS memory is supported.

With Beagle Compiler, your program can fill all of main memory without concern for variable space.

Works only with AppleSoft Basic in ProDOS. ***$74.95***

Fonts & Clip Art

Clip Art Volume 1™

Beagle Bros Clip Art Library features a great collection of exciting graphics that help you get your message across more effectively.

The Clip Art pictures come in four different graphics formats, so you can use them with all your favorite Apple IIGS programs—including AppleWorks GS, BeagleWrite GS, BeagleDraw, Platinum Paint and HyperStudio.

Just a few of the picture categories contained on the disk are Holidays, Sports, Animals, Faces and Transportation. All together, there are over 120 different Clip Art graphics, including a poster-size multi-color map of the United States!

These professional quality graphics let you add just the right touch to your documents - without having to spend hours designing and editing. Beagle Bros Clip Art will make all of your home and business correspondence, flyers, school reports and newsletters look picture perfect. ***$49.95***

**Requires a 3.5 inch disk drive*

Font Library Volume 1™

Add new life and a new look to all of your Apple IIGS programs with Font Library.

Font Library comes with 90 standard GS fonts in 40 different font families. There is a wide range of decorative and fancy fonts—even border fonts. These high quality type styles add a professional look to all home and business correspondence.

With the extensive choice of font sizes and styles, you can give your greeting cards, flyers and handouts dramatic visual impact.

The fonts are compatible with all IIGS-specific programs, including AppleWorks GS, BeagleWrite GS and Platinum Paint. (Even some non-IIGS programs like TimeOut SuperFonts and Publish it! can use Font Library fonts.) These fonts can also be used with AppleWorks 2.0 or later if you have TimeOut SuperFonts. (Read more about TimeOut SuperFonts on page 6.) Font Library is the nicest thing you can do for all of your IIGS programs. ***$49.95***

**Requires a 3.5 inch disk drive*

Beagle Oldies

If you have received Beagle Bros' catalogs in the past, you might be wondering what happened to all the old Beagle Bros utility programs, like DOS Boss and Silicon Salad. They are not in our catalog, but they are still alive and well on Pro-Beagle, the Beagle Bros bulletin board. All you need is a modem and a communications program (see page 17 for some great ones) and you can have them for free! There are some real classics in this collection:

Alpha Plot **Flex Type**
Beagle Bag **Beagle Basic**
Frame-Up **DOS Boss**
Pro-Byter **Big-U**
Pronto DOS **D Code**
Silicon Salad **Fat Cat**
Double Take **Extra K**
Tip Disk #1 **Utility City**
Shape & Font Mechanic

Yes, these programs are free. But please don't give away any programs other than those listed here.

Pro-Beagle
(619) 558-6151

Updates

To update your Beagle Bros software, all you need to do is send us your original disk (one size only, please) and $10 for each program. This charge includes handling and return postage. If you have eight or more programs to update, the cost is $75 for all of them.

If you have any questions concerning updates, please call us at (619) 452-5500. For product information and technical questions call (619) 452-5502.

To Order:

To order any of our products use the order form inserted in the center of the catalog. If it is missing call:

1-800-345-1750

Apple User Groups

Beagle Bros actively supports Apple User Groups and we encourage you to join one if you haven't already. Call the Apple User Group Connection at 800-538-9696 to inquire about the group nearest you.

There are many benefits to being a member of a user group including:

- Help with hardware or software problems
- Public domain software library
- Consumer Co-op's
- Product demonstrations
- Newsletters
- Beagle Buddies (see below)

Beagle Buddies

Beagle Buddies are members of local Apple user groups who are available to answer questions you may have about Beagle Bros software. You'll find your local Beagle Buddy can be a great help. They even offer our software updates at reduced rates!

There are hundreds of Beagle Buddies across the U.S., and even overseas. For the name of a Beagle Buddy in your area, contact your local user group or write to Lee, the Head Beagle Buddy, in care of Beagle Bros or call (619) 452-5502.

T-Shirts

Beagle Bros now has high-quality t-shirts showcasing our great 4-color logo. They sell for $12.50 each (plus shipping & handling) and come in a variety of sizes. See our insert/order form for more information.

30-Day Guarantee

All Beagle Bros products carry a 30-day money-back guarantee. If you are not completely satisfied return the product to the place of purchase, along with a sales receipt. Only products purchased directly from Beagle Bros may be returned to Beagle Bros. Please check with your dealer before purchasing.

Introducing the Residents of Our Beagle Town . . .

(First row from L-R) **Andrea W.** — *In charge of order processing, Andrea serves as our town banker to make sure your money is deposited and your products ordered.* **Jon Simonsen** — *As our Sales and Marketing Director, Jon peddles our products from town to town. By the way, we still have some hair tonic left at a smoking deal!* **Mark Simonsen** — *Serving as President and mayor of our fine community, Mark gives us direction and leadership to help make your experience with Beagle Bros pleasant.* **Jill S.** — *In her order processing role, Jill serves as Andrea's right hand bookeeper to ensure you receive your products promptly and accurately.* ***(Second row from L-R)*** **Nancy L.** — *Nancy runs our shipping and production department, making sure our products are shipped fast. With Nancy in charge the mail gets through and your orders go out.* **Marcia L.** — *As Operations Manager, Marcia serves as our town teacher. Her tight operation is under schoolroom control. Marcia also handles accounts receivable and payable.* **Rebecca L.** — *Rebecca is our town dressmaker. As the person in charge of all our graphic design, Rebecca makes sure our ads are dressed well, our products are packaged in great boxes and our brochures are entertaining.* **Bevey M.** — *As Advertising and Promotions Director, Bevey is our town gossip spreading the word about our products to anyone who will listen and sometimes to those who won't.* **Lee Dronick** — *Lee is Captain of Ft. Pro DOS commanding our tech support lines. Lee makes sure your questions are answered and you receive the kind of tech support that has made Beagle Bros famous.* **Kurt Charney** — *Lets face it, Kurt may look like our town swindler, but in fact, he's an honest guy who helps Lee out in tech support.* ***(Back row L-R)*** **Judy M.** — *Quick and able, Judy helps Nancy keep our Pony Express department running smoothly.* **Jeff Jungblut** — *As our town reporter, Jeff writes our technical manuals, spec sheets and other materials. Yes, you can believe every word he says.* **Craig Newby** — *Keeping our shipping women in line, Craig lends some muscle, strength and backbone to physically drive our Pony Express team.* **Mark Munz** — *Mark is in charge of our systems operation. He is our town doctor, making sure whatever bugs you have are cured.* **John Sculley** — *(behind curtain) John's face proudly adorns our Beagle Bucks.*
